

Secure ID Cards for inkjet printers

JetPak™

Specifically developed for inkjet printers, **JetPak** cards feature exciting photo-quality color reproduction. These all-plastic cards allow most color inkjet printers to produce ID badges with rich, saturated photos of unprecedented color quality.

SECURITY TIP

Include a security feature in your factory-printed graphics or logo to reduce the risk of forged IDs.

Protected by a durable outer laminate layer, JetPaks are also designed to resist cracking, chipping, or warping – even in temperature extremes. For consistent image quality, we will custom print your JetPaks using your graphics and design. All you need to do is print the cardholder photo and name with an economical inkjet printer and laminate.

Dual-Sided Printing

If you're printing bar codes or variable data on the back of your card, consider Dual Core JetPaks. They provide side-by-side printing of the front and the back of your card with one pass through the printer.

JetPaks are Ideal for:

- Security photo IDs
- Inkjet-printed bar codes and variable data
- Magnetic stripe swipe readers
- Bar code wand or swipe reader

Features:

- Developed specially for inkjet printers
- Vivid photo-quality color reproduction
- Two cards per sheet – provides stability for printer
- Approximate sheet size: 4-1/2" x 11"; also available in dual core
- Compatible with IDenticard® ID badge systems

Card Security:

As technology becomes more readily available to the average computer user, it is easier to duplicate and create forged ID cards. IDenticard offers a superior selection of ID card security features to protect your cards, your employees and your facility. Our security features do not require any special viewing devices or equipment. You can determine whether the ID card is authentic at a glance.

Ask us about:

- **IDentiGuard™** (holographic or metallic security application embedded in the card)
- **IDentiTouch™** (heat-sensitive ink that fades temporarily)
- Oversized cards
- Other security options

SECURITY TIP

*Use **Dual Core JetPaks** to print cardholder's photo on the front and the back of the card. Even if the card flips over, you can still visually identify the cardholder.*

Seeing is Believing!
