

PremiSys: Join the Revolution.

Access control with an eye to the future

IDenticard® ushers in the next era of security management with the release of PremiSys™ access control system. This solution offers an impressive set of advanced features made available by today's sophisticated technology. PremiSys is an attractive option for facilities of every size. PremiSys is the versatile, access solution from the trusted name in security.

Feature rich. Security enhanced.

New system features maximize operating efficiency

The PremiSys access control system is loaded with exciting features, designed to maximize operating efficiency while elevating the level of security for your staff and facility. Its software platform uses Windows® standard controls, which allow operators to quickly learn the PremiSys system.

Integrated solutions.

One source for all your integrated products and systems

PremiSys was developed as a result of extensive focus group research to uncover what customers wanted. The system is easy to use and install, reliable and compatible so it can grow with your needs.

For almost 40 years, IDenticard Systems has been leading the way with innovative technologies, providing customers worldwide with integrated security solutions from a single, direct source.

Our comprehensive line of integrated security products includes custom ID cards, badge accessories, ID badge software, access control, smart cards, biometric solutions and visitor management programs. Most important, because we develop all of our software, our customers are assured the highest level of reliability and support.

ISV/Software Solutions

Microsoft is a registered trademark of Microsoft Corporation in the United States and/or other countries.

Key features include:

- **Hardware filtering via permissions:** control which devices an operator can view in the software.
- **Filter cardholder access groups:** restrict and control the access groups that operators can assign to cardholders.
- **Active directory tie-in:** manage passwords with a link to LDAP.
- **ADA extended door time:** grant specific cardholders additional time to use a door.
- **Cardholder reporting:** easily personalize, customize and save reports.
- **Triggers and procedures:** in case of unauthorized use or other events, the system can be set to lock all doors, shut down a zone or cause any other action.
- **Mantrap options:** prevent some doors from being used while certain others are open.
- **Enhanced elevator control:** control and track a cardholder's floor and elevator access.
- **Robust photo ID software:** create custom ID card designs with built-in *expressionsID™* software.
