Self-service Visitor Management Systems

Visitor check-in solutions for lobbies and reception centers

Managing corporate lobbies is more challenging than ever. Security needs have increased, along with demands by image-conscious management, for faster visitor registration and more professional-looking badging systems.

IDenticard, a leader in the world of security identification, now offers two powerful self-service visitor management packages. Each one is an ideal solution for businesses seeking to monitor and control visitor traffic with a minimum level of supervision. Your visitor simply inputs information on the touch-screen monitor or scans a driver's license, business card, or passport. In seconds, the software prints a customized, professional identification badge. The built-in camera can capture a photo as well, depending on your preference.

The IDenticard Self-service Visitor Management solution delivers:

- Streamlined visitor check-in process
- Safe, secure welcome for visitors, vendors, and contractors
- Minimum level of supervision
- Choice of business card or driver's license scanning
- Powerful, versatile software system that tailors the registration process to your specific needs

1 | Floor-Standing Kiosk

Our full-featured, floor-standing visitor management kiosk comes complete with a built-in touch screen, computer, camera, driver's license/business card scanner, and label printer. All of the hardware is mounted right in the unit. The package also includes personalized, die-cut graphics applied below the touch screen to enhance your company image.

2 | Counter or Desktop Registration Station

Conveniently-sized, this kiosk-like station is designed to sit on a desktop or counter for efficient visitor check-in/check-out where space is limited. At the heart of the system is a 22" touch-screen monitor with a built-in computer and camera. The self-contained system also features a DYMO label printer that prints out badges in fewer than five seconds.

Featuring award-winning software

Both of our Visitor Management packages feature *PassagePoint™* Global, the award-winning software system designed to create temporary badges, track movement of visitors, and generate reports. *PassagePoint* provides comprehensive functionality, optional hardware, and a selection of supplies that make it easy to implement a world-class lobby security solution.
